The Strength and Styling of Beaches Pools

Beaches' Exclusive Support System Combines Great Looks and Real Strength

CHANNEL-LOK II BUTTRESS SYSTEM

The Engineering design of the Channel-Lok II buttress system has been developed to require fewer buttresses without compromising its strength and reliability. Along with Beaches' unique structural system and fewer buttresses, the Channel-Lok II buttress system will be appreciated for its good looks and ease of installation. This new buttress system can be installed on a flat concrete surface. There is no excavation or digging required, only a flat compacted level surface.

A vigorous backhoe test is performed prior to the launch of each new pool.

The new Channel-Lok II buttress system has been put through an intensive testing process to provide peace of mind for the final consumers knowing they will enjoy years of worry-free fun and relaxation. All pool designs meet or exceed the pool industry standard. In addition to an extensive in-house Engineering design process, a vigorous backhoe test is performed prior to the launch of any new pool.

The Channel-Lok II buttress system is available on value-priced models with a 52" wall height.

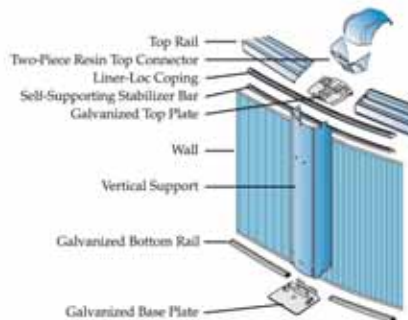

All-Weather Protection for Years of Family Fun

The top and vertical rails on every Beaches pool undergo a state-of-the-art protective treatment process. In addition, they are coated with Texture-Kote. This combination provides incredibly long-lasting, all-weather protection with added resistance against corrosion, scratching, and damaging UV rays. Beaches' unique quadra-fold system and bolting pattern provides maximum wall joint strength. Pool walls are

corrugated for increased durability and resistance to ice and impact damage. Only Beaches pools feature the self-supporting stabilizer bar developed to simplify homeowner installation. This ease of assembly has made Beaches pools the number one choice of many professional installers.
